JOCKSHOCK

WRITTEN BY ATHLETES WHO HAVE LIVED OUT OF A GEAR BAG

THE GEAR SMELL FIELD GUIDE

What to do after every practice, every game, and every tournament so your gear does not turn into a rolling dumpster. Plus the 3 mistakes making funk worse.

SPRAY · AIR · STORE

FIELD RULE

That funk is not a personality trait. It is a routine problem. Fix the routine and the bag will stop turning heads for all the wrong reasons.

SECTION 01

WHY GEAR GOES NUCLEAR

Gear smell usually starts with three things: sweat, heat, and a closed bag. Add cleat liners, foam pads, glove palms, helmet padding, and one long car ride home, and you have a full-blown stink factory.

THE REAL ISSUE

Most athletes do not have a gear problem. They have an after-practice problem. The gear gets used hard, tossed wet, zipped up, and forgotten until tomorrow.

THE FIX

You do not need a complicated ritual. You need a repeatable one: open it, hit the stink zones with **JockShock**, let it breathe, then put it away.

WHY IT WORKS

Most sprays perfume the funk. JockShock uses ZeroPoint Technology (hypochlorous acid) to go after the source of the smell. No perfume stack. Built for foam, liners, and pads.

THE FUNK PROBLEM

THE FUNK LOOP

01 Sweat gets trapped inside gear.

02 Gear gets zipped in a bag or left in the car.

03 Odor builds where air cannot reach.

04 The next practice starts funkier than the last.

THE 60-SECOND POST-PRACTICE ROUTINE

AFTER EVERY PRACTICE

This is the daily rep. Do it while the gear is still fresh from practice, not two days later when the bag has become a science project.

1 Dump the bag.

Do not let wet gear marinate in a sealed pocket. Open the bag and separate the high-funk pieces first.

2 Open the gear.

Loosen cleats, spread gloves, open pads, and expose the places that actually hold sweat.

3 Hit the stink zones with JockShock.

Hit the inside of cleats, footbeds, glove palms, pad interiors, helmet liner areas, and the gear bag.

4 Let it breathe.

Give the gear air before you zip it back up. Air is part of the routine, not an optional luxury.

ATHLETE NOTE

You are already tired. Nobody wants a 12-step gear ritual. Keep JockShock in the bag. Spray the stink zones. Let the gear breathe. Do it again tomorrow.

GAME-DAY RESET

AFTER EVERY GAME

Games are worse than practices. More sweat, more adrenaline, more sitting around after. If you wait until the next practice, the bag odor has already started winning.

LOCKER ROOM TRIAGE

- Pull the worst pieces out first: cleats, gloves, pads, socks, and compression gear.
- Do a quick spray on the gear headed back into the bag.
- Do not bury wet gear under towels, uniforms, slides, and snack trash.

AT HOME RESET

- Empty the bag completely. Hidden, damp pieces are usually the ones that punish you later.
- Hit the sweat-heavy areas with JockShock, then let the gear air before storage.
- Wash what can be washed. Care for what cannot. Do not treat every piece of gear the same.

CAR RIDE RULE

The trunk is not a recovery room. The longer wet gear sits sealed up, the harder the funk is to undo.

POST- GAME

MULTI-GAME SURVIVAL PLAN

AFTER EVERY TOURNAMENT

Tournament weekends are where gear smell earns its varsity letter. You need a between-games plan, an overnight plan, and a travel-home plan.

1 Between games

Open cleats and gloves. Give gear air whenever you have a break. Do not zip everything tight just because you are moving fields.

2 Overnight

In the hotel or house, unload the bag. Hit the worst pieces with JockShock, spread them out, and keep them out of the bathroom steam zone.

3 After the final game

Before the long ride home, hit the stink zones with JockShock and give the gear whatever air you can. Future you deserves better.

4 Next-day reset

When you get home, do the full empty-out. Check pockets, wash what can be washed, and re-pack only dry gear.

POST-TOURNAMENT

PACK THIS

One bottle of JockShock. One trash bag for dirty laundry. One mesh bag for small pieces. One rule: wet gear does not disappear into the bottom of the bag.

THE 3 MISTAKES THAT MAKE FUNK WORSE

STOP DOING THESE

Most gear smell disasters are self-inflicted. These three habits make the funk stronger, not weaker.

01 Fragrance bombing

If the gear already reeks, fragrance just stacks a new smell on top of the old one. That is how you get “fake flowers plus locker room.”

02 Zipping wet gear shut

A closed bag traps the exact conditions that make odor build. Open the bag, separate the pieces, and let the gear breathe.

03 Using the wrong cleaner

Expensive gear is not a kitchen counter. Harsh shortcuts can be rough on foam, liners, adhesives, and finishes. Use gear-care thinking, not panic-cleaning.

JockShock was built for the bag, not the kitchen counter.

GEAR-BY-GEAR CHECKLIST

WHERE TO SPRAY JOCKSHOCK

Do not just mist the outside and call it a day. Hit the places that take the most sweat and get the least air.

SPRAY ZONES

CLEATS + SHOES

- Toe box
- Heel cup
- Insole/ Foot bed
- Tongue underside
- Inside collar

PADS + PROTECTION

- Inside foam contact points
- Straps
- Shoulder areas
- Girdles
- Shin guards

GLOVES + HELMETS

- Glove palms
- Finger channels
- Helmet liner areas
- Chin strap areas
- Headgear padding

BAG + SMALL GEAR

- Bottom seams
- Side pockets
- Laundry pocket
- Small gear compartments
- Mouth guard case exterior

SMART SPRAY

Follow your equipment manufacturer’s care instructions. When in doubt, test a small area first. Spray the stink zones, let the gear air, then store it.

ONE BOTTLE. EVERY STINK ZONE. KEEP IT IN THE BAG.

DIRECTIONS, SAFETY + STORAGE

HOW TO USE IT

01 **Open it up.**
Unzip, loosen and spread the gear so the spray can reach the inside.

02 **Mist the inside.**
A light, even spray on the sweaty spots. Damp, not dripping. Do not overspray.

03 **Leave it.**
No rinse and no wipe. Let it sit while it dries.

04 **Air dry fully, uncovered.**
Hang it if you can. Short on time? Stuff shoes with newspaper or a dry towel. Then store it.

WHAT IS IN THE BOTTLE

Hypochlorous acid (HOCl) at 200 ppm, the same family of chemistry your immune system makes. Fragrance-free. No dyes, no abrasives, and no film left on the gear.

FOR PARENTS: SAFETY + STORAGE

- Spray the gear, not the athlete. Do not spray toward eyes or faces.
- Skin contact is fine. JockShock is made to be safe for skin contact.
- Keep the cap on and store the bottle out of direct sun and heat.
- Keep it out of reach of small children.
- Mouthguards: spray the outside of the case only.
- Leather or suede: test a small hidden spot first.

WHEN TO WASH OR REPLACE

If gear still smells after it is fully dry, wash it if the care tag allows. If foam pads or insoles still smell after a few rounds of the routine, it may be time to replace them.

YOUR NEW ROUTINE

PUT JOCKSHOCK IN THE BAG

That is the whole playbook. Not complicated. Not a chore. Just consistent. The routine only works if the bottle lives where the funk starts.

THE FIELD GUIDE VERSION

After practice: open the gear, hit the stink zones, let it air.
After games: unload fully, reset the bag, do not let the trunk cook it.
After tournaments: manage gear between games, overnight, and before the ride home.

NOT COMPLICATED

ORDER JOCKSHOCK TODAY

JockShock is a fragrance-free equipment deodorizer powered by ZeroPoint Technology — hypochlorous acid — built for cleats, pads, gloves, helmets, and the bag itself. Goes after the source. No perfume, no bleach, no harsh chemicals.

BUILT FOR ATHLETIC GEAR

Made for the bag, locker room, garage, and sideline.

NO PERFUME CLOUD

No fake “fresh” scent stacked on top of the funk.

EASY TO KEEP USING

Spray the stink zones. Let the gear air. Move on.
