JOCKSHOCK

BUILT BY ATHLETES WHO HAVE LIVED OUT OF A GEAR BAG

THE GEAR SMELL FIELD GUIDE

What to do after every practice, every game, and every tournament so your gear does not turn into a rolling dumpster. Plus the three mistakes making funk worse.

SPRAY · AIR · STORE

FIELD RULE

Gear smells because sweat sits in it. A quick spray, air and store routine after every use fixes most of it.

SECTION 01

WHY GEAR SMELLS

Gear smell comes from bacteria. They live on skin, feed on sweat, and grow fast in warm, damp, dark places like the inside of a cleat or a zipped bag. As they break down sweat, they make the smell. Heat and a closed bag speed it up.

THE REAL ISSUE

Most gear is not the problem. The hours after practice are. Gear gets used hard, tossed in wet, zipped up and forgotten until tomorrow.

THE FIX

Open it, lightly spray the inside with **JockShock**, let it air dry, then put it away. Same steps every time.

WHY IT WORKS

Most gear sprays cover smell with fragrance. JockShock is fragrance-free hypochlorous acid (HOCl) at 200 ppm, made to treat odor at the source.

THE FUNK PROBLEM

THE FUNK LOOP

01 Sweat gets trapped inside gear.

02 Gear gets zipped in a bag or left in the car.

03 Bacteria grow where air cannot reach.

04 The next practice starts funkier than the last.

THE 60-SECOND POST-PRACTICE ROUTINE

AFTER EVERY PRACTICE

This is the daily rep. Do it as soon as you get home, while the gear is still warm. Do not leave it for tomorrow.

1 Dump the bag.

Do not leave wet gear in a sealed pocket. Open the bag and pull out the smelliest pieces first.

2 Open the gear.

Loosen cleats, spread gloves, open pads, and expose the places that actually hold sweat.

3 Hit the stink zones with JockShock.

Lightly mist the inside of cleats, footbeds, glove palms, pad interiors, helmet liners and the bag. Damp, not soaking. No rinse needed.

4 Let it breathe.

Leave the gear open and uncovered until it is fully air dry. Hang it if you can. Then zip it back up.

AFTER PRACTICE

PARENT NOTE

Nobody wants a 12-step gear ritual after a long practice. Keep a bottle in the bag. Spray the inside, let it air dry, store it. No rinsing or scrubbing.

GAME-DAY RESET

AFTER EVERY GAME

Games are worse than practices: more sweat, and more time sitting in the bag afterward. If you wait until the next practice, the smell has a full day to build.

LOCKER ROOM TRIAGE

- Pull the worst pieces out first: cleats, gloves, pads, socks, and compression gear.
- Do a quick spray on the gear headed back into the bag.
- Do not bury wet gear under towels, uniforms, slides, and snack trash.

AT HOME RESET

- Empty the bag completely. Hidden, damp pieces are usually the ones that punish you later.
- Hit the sweat-heavy areas with JockShock, then let the gear air before storage.
- Machine-wash the washables (socks, compression gear, jerseys) per their care tags. Spray and air dry what cannot be washed, like pads, helmets and cleats.

CAR RIDE RULE

Do not leave the bag in a hot car. Heat and a closed bag make odor build faster. Open it up as soon as you get home.

MULTI-GAME SURVIVAL PLAN

AFTER EVERY TOURNAMENT

Tournament weekends mean more games and less time to dry. Plan for between games, overnight, and the drive home.

POST-TOURNAMENT

1 Between games

Open cleats and gloves. Give gear air whenever you have a break. Do not zip everything tight just because you are moving fields.

2 Overnight

In the hotel or house, unload the bag. Lightly mist the worst pieces with JockShock, spread them out, and keep them out of the steamy bathroom.

3 After the final game

Before the long ride home, spray the inside of the worst pieces and give the gear whatever air you can. Ride with the bag open if possible.

4 Next-day reset

When you get home, do the full empty-out. Check pockets, wash what can be washed, and re-pack only gear that is fully dry.

PACK THIS

One bottle of JockShock. One trash bag for dirty laundry. One mesh bag for small pieces. One rule: wet gear does not disappear into the bottom of the bag.

THE 3 MISTAKES THAT MAKE FUNK WORSE

STOP DOING THESE

Most gear smell problems are self-inflicted. These three habits make the smell stronger, not weaker.

01 Fragrance bombing

If the gear already reeks, fragrance just stacks a new smell on top of the old one. That is how you get “fake flowers plus locker room.”

02 Zipping wet gear shut

A closed bag traps the exact conditions that make odor build. Open the bag, separate the pieces, and let the gear breathe.

03 Using the wrong cleaner

Bleach can wreck pads, and household sprays mostly add fragrance. Harsh cleaners can be rough on foam, liners, adhesives and finishes. Use a spray made for gear and follow the care tag.

JockShock was built for the bag, not the kitchen counter.

GEAR-BY-GEAR CHECKLIST

WHERE TO SPRAY JOCKSHOCK

Do not just mist the outside. Spray the places that take the most sweat and get the least air.

SPRAY ZONES

CLEATS + SHOES

- Toe box
- Heel cup
- Insole/foot bed
- Tongue underside
- Inside collar

PADS + PROTECTION

- Inside foam contact points
- Straps
- Shoulder areas
- Girdles
- Shin guards

GLOVES + HELMETS

- Glove palms
- Finger channels
- Helmet liner areas
- Chin strap areas
- Headgear padding

BAG + SMALL GEAR

- Bottom seams
- Side pockets
- Laundry pocket
- Small gear compartments
- Mouth guard case exterior

SMART SPRAY

Follow your equipment maker's care instructions and test a small spot first. Mist lightly: overspraying can leave a watermark on untreated suede.

ONE BOTTLE. EVERY STINK ZONE. KEEP IT IN THE BAG.

DIRECTIONS, SAFETY + STORAGE

HOW TO USE IT

01 **Open it up.**
Unzip, loosen and spread the gear so the spray can reach the inside.

02 **Mist the inside.**
A light, even spray on the sweaty spots. Damp, not dripping. Do not overspray.

03 **Leave it.**
No rinse and no wipe. Let it sit while it dries.

04 **Air dry fully, uncovered.**
Hang it if you can. Short on time? Stuff shoes with newspaper or a dry towel. Then store it.

WHAT IS IN THE BOTTLE

Hypochlorous acid (HOCl) at 200 ppm, the same family of chemistry your immune system makes. Fragrance-free. No dyes, no abrasives, and no film left on the gear.

FOR PARENTS: SAFETY + STORAGE

- Spray the gear, not the athlete. Do not spray toward eyes or faces.
- Skin contact is fine. JockShock is made to be safe for skin contact.
- Keep the cap on and store the bottle out of direct sun and heat.
- Keep it out of reach of small children.
- Mouthguards: spray the outside of the case only.
- Leather or suede: test a small hidden spot first.

WHEN TO WASH OR REPLACE

If gear still smells after it is fully dry, wash it if the care tag allows. If foam pads or insoles still smell after a few rounds of the routine, it may be time to replace them.

YOUR NEW ROUTINE

PUT JOCKSHOCK IN THE BAG

Spray, air dry, store. Every time. The routine only works if the bottle lives in the bag, right where the smell starts.

THE FIELD GUIDE VERSION

After practice: open the gear, hit the stink zones, let it air.
After games: unload fully, reset the bag, do not let the trunk cook it.
After tournaments: manage gear between games, overnight, and before the ride home.

NOT COMPLICATED

ORDER JOCKSHOCK TODAY

JockShock is a fragrance-free gear deodorizer made with hypochlorous acid (HOCl) at 200 ppm, powered by ZeroPoint Technology. Made for cleats, pads, gloves, helmets and the bag itself. Treats odor at the source. No perfume, no bleach.

BUILT FOR ATHLETIC GEAR

Made for the bag, locker room, garage, and sideline.

NO PERFUME CLOUD

No fake “fresh” scent stacked on top of the funk.

EASY TO KEEP USING

Spray inside, let it air dry, store it. No rinse needed.
